building interactive user interfaces
using React's component-based
architecture || using JSX syntax to
render React components and elements
|| implementing state management
using React Hooks like useState,
useEffect, useContext, etc. || debugging
and fixing React issues using browser
dev tools and React Developer Tools
extension || with tools and libraries that
complement React like Redux tool kit,
React Router

C++

using oop in c++ classes || implement
data structures and algorithms in C++

algorithms

sorting algorithms like Quicksort, Merge
sort || searching algorithms like Binary
Search, Linear Search

HTML

Experienced using HTML tags for text
formatting, links, images, tables, forms,
audio, video, etc ||Experience
incorporating CSS stylesheets into HTML
documents || Ability to develop HTML
templates and frameworks for reuse
across projects

java script

ES6+ features like arrow functions,
classes, modules, async/await, etc. ||
DOM manipulation and event handling
in JS with addEventListener,
querySelector, etc. || using JS to validate
form inputs and handle form
submissions || Working with AJAX
requests in JS using XMLHttpRequest or
fetch API || Able to debug and fix JS
issues using browser developer tools
and debugging tools.... and more

jQuery

using jQuery to easily add interactivity
to websites and web apps

git&github

Familiarity with Git commands like init,
add, commit, push, pull, clone,
checkout, revert, status, etc. || Have
created GitHub Pages websites from
project repositories
